UI Solutions Group's

Rates & Tariffs Module

Available typically as part of our ***Revenue Solution***

With a rapidly changing regulatory landscape, it is essential to adopt the best toolkit for addressing a myriad of possible tariff changes. Allowing analysts to model current and proposed tariffs with full meter data across the entire customer population can unlock tremendous insights.

The Rates & Tariffs Module is a **flexible and dynamic,** end-to-end modeling solution that allows users to **easily define rules** and robust calculations to analyze the impact of various regulatory changes across an entire customer base.

UI'S RATES & TARIFFS MODULE ENABLES UTILITIES TO:

► **Generate timely billing determinant data:** Leverage customer data history and the UIP tariff engine to generate normalized test year data in minutes.

► **Standardize Regulatory process**: Systematize rate design rules without losing flexibility to model scenarios built from the ground up, based on customer data.

► **Improve rate case outcomes:** Calculate the impact of tariff and pricing changes on customer bills with frequency distribution analytics to visualize results, identify rate shock, and reduce regulatory lag.

► **Prevent Revenue Erosion:** Identify the best-fit rate for every customer under current and proposed rate scenarios, precisely quantifying customer migration and revenue erosion before it occurs.

► **Advance customer insights:** Run full population normalizations and fully integrate with customer segmentation data.

Our **Rates & Tariffs Module** can be configured with robust components, including:

Bill Estimator:

Provides users with a platform to do free-form what-if analysis with a customer bill calculator.

Customer Analytics:

Informs users of the impact of modeling changes, such as price changes or potential customer migrations, and includes Bill Impact reporting and Revenue Erosion analysis.

Rate Design:

Rules engine that derives new tariff prices and can also serve as a source for certain Regulatory filing data.

The Power of Integration: UI's Rates & Tariffs Module integrates with other modules, ensuring data accuracy and saving time
